Abstract of JP11161288

PROBLEM TO BE SOLVED: To play a karaoke music with an image data independently corresponding to each karaoke music without increasing the memory capacity for image data of each karaoke device.

SOLUTION: A plurality of karaoke devices A-E are connected to a network 1 such as Ethernet. Each karaoke device stores a plurality of music data to play a karaoke music according to a user's request. The background images to be regenerated according to karaoke musics are independently conformed to each karaoke music. Each karaoke device stores independent image data corresponding to a part of karaoke musics. When the independent image data of a

requested music is not stored in its own device, the data is transferred from another karaoke devices through the network 1, and the background image independently corresponding to the karaoke music is reproduced by use of this data.
